### **DETAILED ACTION**

### Response to Arguments

1. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection as necessitated by applicant's amendments.

# Specification

2. The amendment filed 5/10/07 is objected to under 35 U.S.C. 132(a) because it introduces new matter into the disclosure. 35 U.S.C. 132(a) states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows: the rectangular recess axially extending into the tool head from the planar peripheral surface is not in the specification as originally filed.

Applicant is required to cancel the new matter in the reply to this Office Action.

### Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the first paragraph of 35 U.S.C. 112:
  - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 4. Claim 17 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The rectangular recess axially extending into the tool head from the *planar* peripheral surface was not described in the specification at the time the application was filed.

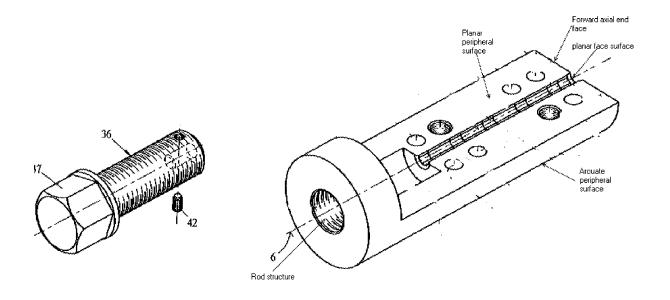

Art Unit: 3641

## Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 6. Claims 5-10 and 15-18 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Klann (US Patent # 6,966,210). Klann discloses a tool head comprising an arcuate peripheral surface comprising a shape conforming to a segment of a cylinder, a planar peripheral surface subtending the arcuate peripheral surface, a forward axial end face including at least one planar face surface (best seen in Figures 4 and 10) extending normal to the predetermined axis and a rectangular recess (reference 44) being defined by the tool head and extending into the tool head in a direction along the predetermined axis from the forward axial end face, and extending from the arcuate peripheral surface in a direction perpendicular to the axis.

Application/Control Number: 10/807,583

Art Unit: 3641

The tool head comprising a rod structure disposed at an end of the tool head. The forward axial end face comprises an arcuate outer planar face surface which extends radially inward from the arcuate peripheral surface and a central planar face surface disposed radially within the arcuate outer planar face surface and recessed inwardly of the tool head from the arcuate outer planar surface in a direction along the axis (best seen in figures 4 and 10). The tool head comprising a screwhead realeasby attaches a handle (reference 17) to the to tool head, the screw head disposed at an end of the tool head. The tool head is a single piece of unitary construction. The predetermined axis is perpendicular to the planar peripheral surface. The rectangular recess is a slot shaped configuration which extends into the tool head from the arcuate peripheral surface. The tool head is coated by plastic (i.e. a material selected to dissipate static electricity. Productby-process claims are not limited to the manipulations of the recited steps, only the structure implied by the steps; "even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 227 USPQ 964. Regarding the process for making the claimed projectile or the **Product by Process** Claims, applicant is direct to MPEP § 2113 cited in the prior office action. Therefore the tool head being produced by unitary construction is not pertinent in this instance to the patentability of this product claim.

#### Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michelle (Shelley) Clement whose telephone number is 571.272.6884. The examiner can normally be reached on Monday thru Thursday 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Carone can be reached on 571.272.6873. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
